

## **White House Water Summit Commitment – 3/22/2016**

The **Interstate Council on Water Policy (ICWP)** is announcing that over the next 24 months, it will engage over 100 partners—including State water-management agencies, interstate basin commissions, and NGOs—in (1) communicating the importance of water data and science in informing water resources policy and planning; and (2) identifying and promoting opportunities to enhance State and regional water-resource planning efforts. As part of this effort, ICWP will convene at least two national stakeholder workshops focused on water-data collection and water use, and at least two workshops highlighting successful practices from State and interstate water-plan development.

### **About ICWP**

ICWP is the national water policy organization of state, interstate, regional, and other water resource management professionals. In the ICWP, members develop unified positions on national policy issues and promote them to policy makers in Washington. ICWP carries out its mission to enhance the stewardship of the nation's water resources through:

- serving as the national policy voice for the state and interstate water resource managers;
- providing a national forum for the evaluation of policy issues and the development of solutions to water resource challenges;
- providing leadership in the promotion and implementation of national policies supporting integrated water resource planning and management; and,
- providing opportunities for members to engage federal agency and Congressional leaders in shaping national water policy.

ICWP's strategic plan guides our organizational water policy development through research, communication and collaboration, and focuses our effort in three areas: 1) National Water Policy Development; 2) Integrated Planning for Sustainable Management; and 3) Water Data and Science to Inform Policy and Planning.
